Practical No.05

Q.1 Develop New Employee registration form with different form controls and validate it with ng-show.

```
<!DOCTYPE html>
<html ng-app="myApp">
<head>
  <script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></script>
</head>

<body ng-controller="myCtrl">

<h3>New Employee Registration</h3>

<form name="empForm" novalidate>

  Name:
  <input type="text" name="ename" ng-model="emp.name" required>
  <span ng-show="empForm.ename.$touched && empForm.ename.$invalid">
    Name is required
  </span>
  <br><br>

  Password:
  <input type="password" name="pwd" ng-model="emp.password" required>
  <span ng-show="empForm.pwd.$touched && empForm.pwd.$invalid">
    Password is required
  </span>
  <br><br>
  Gender:
  <input type="radio" ng-model="emp.gender" value="Male"> Male
  <input type="radio" ng-model="emp.gender" value="Female"> Female
  <input type="radio" ng-model="emp.gender" value="Other"> Other
  <br><br>

  Skills:
  <input type="checkbox" ng-model="emp.java"> Java
  <input type="checkbox" ng-model="emp.python"> Python
  <input type="checkbox" ng-model="emp.html"> HTML
  <input type="checkbox" ng-model="emp.css"> CSS
  <br><br>
```

```
    Department:
    <select name="dept" ng-model="emp.dept" required>
      <option value="">Select</option>
      <option value="IT">IT</option>
      <option value="HR">HR</option>
      <option value="CE">Computer Engineering</option>
    </select>
    <span ng-show="empForm.dept.$touched && empForm.dept.$invalid">
      Department is required
    </span>
    <br><br>

    <button type="submit" ng-disabled="empForm.$invalid">Register</button>
</form>
<hr>

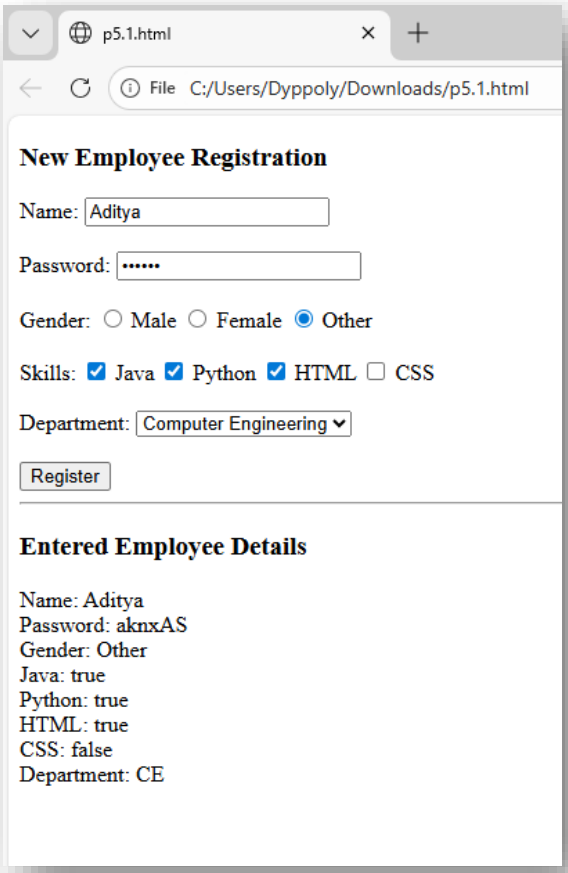
<h3>Entered Employee Details</h3>

Name: {{emp.name}} <br>
Password: {{emp.password}} <br>
Gender: {{emp.gender}} <br>
Java: {{emp.java}} <br>
Python: {{emp.python}} <br>
HTML: {{emp.html}} <br>
CSS: {{emp.css}} <br>
Department: {{emp.dept}} <br>

<script>
    var app = angular.module("myApp", []);

    app.controller("myCtrl", function($scope)
 {
      $scope.emp = {};
    });
</script>

</body>
</html>
```



Output:-

Q.2] Develop Student exam registration form and validate it with ng-controller directive.

```
<!DOCTYPE html>
<html ng-app="myApp">

<head>
   <script src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></script>
</head>

<body ng-controller="myCtrl">

<h3>Student Exam Registration</h3>

<form name="examForm" ng-submit="register()" novalidate>

   <!-- Student Name -->
   Name:
   <input type="text" name="sname" ng-model="student.name" required>
   <span ng-show="examForm.sname.$touched && examForm.sname.$invalid">
      Name is required
   </span>
   <br><br>

   <!-- Roll Number -->
   Roll No:
   <input type="number" name="roll" ng-model="student.roll" required>
   <span ng-show="examForm.roll.$touched && examForm.roll.$invalid">
      Roll No is required
   </span>
   <br><br>

   <!-- Subject -->
   Subject:
   <select name="subject" ng-model="student.subject" required>
      <option value="">Select</option>
      <option value="Maths">Maths</option>
      <option value="Science">Science</option>
      <option value="OSY">OSY</option>
      <option value="CSS">CSS</option>
      <option value="MAD">MAD</option>
   </select>
   <span ng-show="examForm.subject.$touched && examForm.subject.$invalid">
      Subject is required
```

```
    </span>
    <br><br>

    <button type="submit" ng-disabled="examForm.$invalid">
        Register
    </button>

</form>

<!-- Show result only after valid submission -->
<div ng-show="submitted">
    <h4>Registered Details</h4>
    Name: {{student.name}} <br>
    Roll No: {{student.roll}} <br>
    Subject: {{student.subject}}
</div>

<script>
    var app = angular.module("myApp", []);

    app.controller("myCtrl", function($scope) {

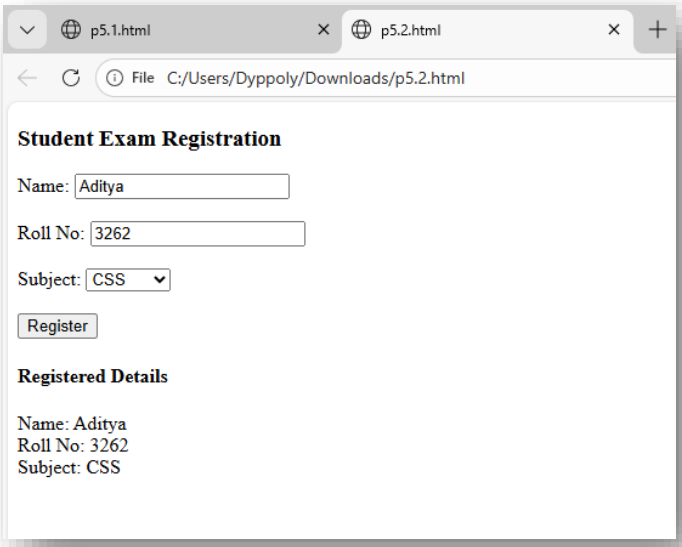
        $scope.student = {};
        $scope.submitted = false;

        $scope.register = function() {
            if ($scope.examForm.$valid) {
                $scope.submitted = true;
            }
        };

    });
</script>

</body>
</html>
```

Output :-



Q.3] Develop a form with different controls and validate it onclick of submit button using ngclick.

```
<!DOCTYPE html>
<html ng-app="myApp">
<head>
   <script
src="https://ajax.googleapis.com/ajax/libs/angularjs/1.8.2/angular.min.js"></script>
</head>

<body ng-controller="myCtrl">
<h3>User Registration Form</h3>
<form name="userForm">

      Name:
   <input type="text" name="uname" ng-model="user.name">
   <span ng-show="submitted && !user.name">
      Name is required
   </span>
   <br><br>

     Password:
   <input type="password" name="pwd" ng-model="user.password">
   <span ng-show="submitted && !user.password">
      Password is required
   </span>
   <br>

     Gender:
   <input type="radio" ng-model="user.gender" value="Male"> Male
   <input type="radio" ng-model="user.gender" value="Female"> Female
   <span ng-show="submitted && !user.gender">
      Select gender
   </span>
   <br><br>

      Course:
   <select ng-model="user.course">
      <option value="">Select</option>
      <option value="BTech">BTech</option>
```

```
      <option value="MBA">MBA</option>
    </select>
    <span ng-show="submitted && !user.course">
      Select course
    </span>
    <br><br>

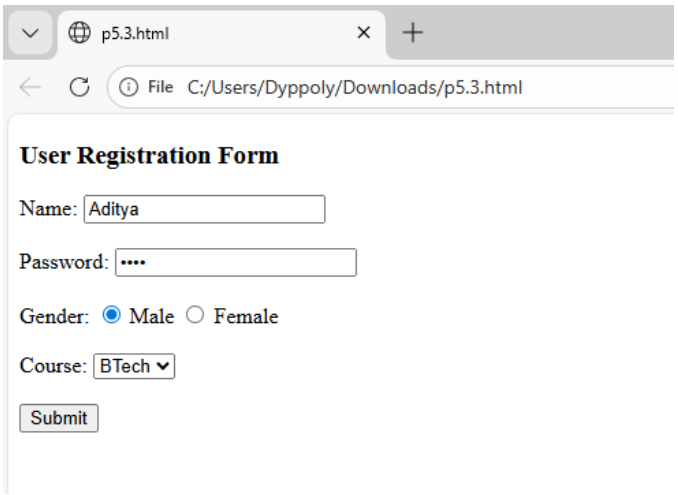
    <button ng-click="submit()">Submit</button>
</form>

<script>
    var app = angular.module("myApp", []);

    app.controller("myCtrl", function($scope) {

      $scope.user = { };
      $scope.submitted = false;
      $scope.submit = function() {
        $scope.submitted = true;
      };

    });
</script>

</body>
</html>
```


Output :-
