Practical No 4

1. Write code to display user input from EditText into TextView

2. Modify the app to show a greeting like “Hello, [user name]!” using input from EditText

3. Change the font size and color of the TextView using XML.

XML Code:

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout
xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:id="@+id/main"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:gravity="center"
    tools:context=".MainActivity">

    <TextView
        android:id="@+id/txtUesrInput"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:text="Display User Input!"
        android:textSize="30sp"
        android:textColor="#E91E63"
        android:background="#979097"
        />

    <EditText
        android:id="@+id/eTxtUserInput"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:ems="10"
        android:inputType="text"
        android:layout_marginTop="20dp"
/>

</LinearLayout>
```

Java code:

```
package com.example.apptextviewedittext;

import android.os.Bundle;

import androidx.activity.EdgeToEdge;
import androidx.appcompat.app.AppCompatActivity;

import android.text.Editable;
import android.text.TextWatcher;
import android.widget.TextView;
import android.widget.EditText;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        TextView txt = findViewById(R.id.txtUesrInput );
        EditText edittxt = findViewById(R.id.eTxtUserInput) ;

        edittxt.addTextChangedListener(new TextWatcher() {
            @Override
            public void afterTextChanged(Editable s) {
                String strUserInput = edittxt.getText().toString();
                txt.setText("Hello, " + strUserInput + "!");
            }

            @Override
            public void beforeTextChanged(CharSequence s, int start, int count, int after) {
            }

            @Override
            public void onTextChanged(CharSequence s, int start, int before, int count) {
            }
        });
```

```
    }
}
```

OUTPUT:
