Practical No.13

Q.2] Design a test case to verify “Save As” functionality for existing files.

Test Case ID	Objective	Test Steps / Input Data	Expected Result	Actual Result	Status
TC_01	Verify “Save As” by saving file with .java extension	1. Click Save As 2. Enter file name with .java extension 3. Click Save	File should be saved successfully with .java extension	File saved successfully	Pass
TC_02	Verify “Save As” option by saving existing file into another directory	1. Click Save As 2. Enter file name with .pdf extension 3. Select D: drive 4. Click Save	File should be saved successfully in selected directory	File saved successfully	Pass
TC_03	Validate “Save As” using the same name of an existing file	1. Click Save As 2. Enter file name: Doc1.pdf 3. Click Save	Error message should be displayed: “File name already exists”	Error message displayed	Pass
TC_04	Validate “Save As” with multiple special characters in file name	1. Click Save As 2. Enter file name: word@#$%.doc 3. Click Save	Error message should be displayed for invalid file name	File not saved and error displayed	Pass

Q.5] Suggest negative test cases for file saving and opening invalid files.

Test Case ID	Objective	Test Steps / Input Data	Expected Result
TC_NPAD_01	Verify behavior when saving a file without file extension	Enter file name as datafile (without extension) and click **Save**	System should reject the save operation or prompt user to add a valid file extension
TC_NPAD_02	Verify behavior when opening a non-existing file	Try to open file abc123.txt which does not exist	System should display **"File not found"** error message
TC_NPAD_03	Verify behavior when opening a corrupted file	Try to open a corrupted or empty .txt file	System should display **"Unable to open file"** error message
TC_NPAD_04	Verify behavior when opening a file without permission	Try to open a restricted or protected file	System should display **"Permission denied"** or access denied message
